

Dacca July 14th 1799.

Dear Dr. Dinnwiddie,

I brought herewith me my
Air Pump, & have made it a present
to Patterson. And as it is great amusement
to him, & his friends among the natives
it is very anxious to have it complete,
you know in what it is deficient, and
if you ^{can} spare him all, or even some of the
apparatus it wants, you would greatly
oblige both him & me.

The principal things he wants, is a tall
receiver, for the experiment of the Gunica &
feathers. Two brass demispherical cups, and
a tall receiver that is close at top. Any
other things that you can part with, de-
scribing what experiments they are for,
will be very acceptable, & any expense
paid for them with many thanks by

Yours Ob^{dly}
